212   Sehiah Street   +962(07)96159307

Tatweer Al-Hadari, Amman   aymanjaber2012@gmail.com

Personal Summary:

I am an Industrial Engineer with a passion and experience in programming and startup entrepreneurship focused in the IT and humanitarian sectors.

Education:

Currently enrolled in an Industrial Engineering Bachelor course, at The University of Jordan, expected to graduate in December 2020.

Academic Accomplishments:

Competed in the "Startup Week Competition" in The University of Jordan 2017, a 2 day competition focused on entrepreneurship.

Competed in the "Global Game Jam" 2018, a competition focused on creating a functional prototype of a game in under 48 hours.

Completed and won in the University level Hult Prize competition in 2018, an international entrepreneurship competition focused on social innovation, and solving problems posed by the UN.

Completed an intensive 7 week android course, with focus on the Kotlin Programming Language, where we presented a prototype of our final app in a competition funded by the UN, the program core message was "developing apps for people in need".

I have received 2 certificates from the 1 Million Arab Coders Initiative in the Android Development Track, a program that aims to empower coders from the Arab World to get the skills and knowledge in order to compete at an international level.

I have a TOEFL ITP certificate with a final total score of 637, with a grade of C1 in all sections.

Professional experience:

Interned at Kawar Shipping, a Jordan based shipping company.

Worked as a free-lancer in writing English articles for multiple online magazines and for online shopping websites, you can see comments from my previous employers at:

https://www.freelancer.com/hireme/AymanJabr

Software Expertise:

Proficient in Android development, using both the Java and Kotlin languages.

I have programed and published games on the android app stores using the Unity program with C# and Java programming languages.

I have a robust understanding of the SQL programming language using MySQL.

I have a robust understanding of the Python programming and syntax rules.

I have a robust understanding of HTML and CSS designing principles, as well as solid experience with XML design language for android applications.

I have a basic understanding of the Kotlin programming and syntax rules.

I have used, and have a good understanding of the GIT version control system, and the GITHUB repository platform, especially in conjunction with the android studio platform.

You can see some of the projects that I have worked on at:

https://github.com/AymanJabr?tab=repositories

Skilled at using GIMP, an open-source clone of Photoshop image editing software.

I am skilled touch typist with a QWERTY keyboard, with an average speed of over 60 words per minute.

Volunteer work:

Volunteered at a clothes packing factory warehouse for the less fortunate.

Volunteered in the Amman Marathon run 2019.
